Lasso support recovery, sparse random ($q = 0.1$, extension) design ($\alpha = 0.4$, $\delta = 0.75$; 200 reps per point; bands = 95% Wilson CI)
Linear: $k = \lceil \alpha p \rceil$
Sublinear: $k = \lceil \alpha p / \log(\alpha p) \rceil$
Fractional power: $k = \lceil \alpha p^{\delta} \rceil$
